

Online Retail Sales Dashboard Report

Prepared by: Milind Chaudhari

1. Revenue by Country

- United Kingdom contributes the largest share of revenue, far ahead of all other countries.
 - European countries such as Germany, France, and Ireland contribute moderate revenue.
 - Many countries generate minimal revenue, meaning sales are heavily UK-centric.
- Recommendation: Focus marketing and stock planning mainly in the UK, and explore growth in Europe.

2. Revenue by Product

- A few products generate the majority of total revenue (e.g., White Hanging Heart T-Light Holder, Regency Cake Stand).
 - Revenue falls sharply for most other items, indicating product concentration.
- Recommendation: Keep high-revenue products in priority stock; promote or bundle low-performers.

3. Monthly Revenue Trend

- Revenue increases steadily from June and peaks strongly in November.
 - Lowest revenue months are January–March.
 - Trend indicates strong seasonal purchasing behavior.
- Recommendation: Boost inventory and marketing efforts from August to November.

Overall Conclusion

The business is UK-dominant, driven by a limited set of high-value products, and shows clear seasonal peaks. These insights guide decisions in inventory planning, marketing strategy, and customer targeting.
